Check-IT Handheld ANPR

- Point & Click ANPR from a BlackBerry Mobile Data Device
- Receive ANPR alerts from fixed sites

QRO SOLUTIONS HAS ADDED A NEW AND EXCITING PRODUCT TO ITS CURRENT PORTFOLIO TO FURTHER COMPLEMENT THE EXISTING QRO SOFTWARE SUITE.

A large majority of Police forces across the UK were recently issued BlackBerry devices following a national Mobile Data Terminal initiative to help increase the visibility for the police officers.

As ANPR is widely acknowledged as an invaluable tool for intelligence led Policing, it was deemed a natural progression to develop an ANPR application for the BlackBerry platform to further enhance the individual Police Officer's capabilities when on patrol.

The current QRO Check-IT Handheld ANPR application has been specifically designed for "ease of use" taking into account reduced screen size and the displaying of only the most crucial of information.

The QRO Check-IT Handheld ANPR application makes use of the existing BlackBerry hardware platform by utilising the in-built camera to focus on the vehicle number plate and then allow the operator to "snap" multiple car licence plates for onward transmission to the existing

BlackBerry Enterprise Server (BES). Once the image is received by the BES the image will be transmitted over the force network to the QRO Server where ANPR will be performed against the received images. Once ANPR has taken place the resulting Vehicle Registration Number will be matched against the Back Office Vehicle Hotlists and the result transmitted back to both the originating BlackBerry terminal and on to the National Data Centre (NADC).

The alert created from this read can also be forwarded to a control room currently running the QRO alert Console application for further logistic resource allocation planning if necessary.

In addition to performing ANPR the QRO Check-IT Handheld ANPR application can be configured to receive ANPR alerts from any fixed site ANPR system that feeds into an existing QRO Check-IT Back Office product. It is possible to configure BlackBerry groups so only officers expecting to patrol areas in the vicinity of the fixed sites need be alerted.

QRO Solutions always believe in working together in partnership with their customers to further enhance their products; So if you feel that this product and its current functionality has a place within your organisation, or indeed would like to see additional functionality, please do not hesitate to get in contact with us.

Check-IT Handheld can be procured through a framework contract available to all UK police forces and their partners. Further information can be obtained by contacting QRO.
